

Reinventing space operations

Space has changed. Operations have not.

A NewSpace Age is emerging. The launcher and space segments have already been disrupted. Unfortunately, the innovation in the ground segment and operations is lagging behind, and this proves to be the single biggest challenge in our breakthrough towards a future new space economy.

Until now. **Telespazio is reinventing space operations and has created ENABLE.**

Leveraging decades of experience in ground systems and operations, combined with modern information technologies, ENABLE empowers your business throughout its whole lifecycle: from early feasibility studies, deployment of an in-orbit demonstrator, scaling the constellation up to full operational capabilities.

No matter if your interest lies in Earth Observation, Telecommunications or Technology Demonstrators, with ENABLE service platform, controlling, planning and automating your operations, downloading your data and delivering it to your customer, become a breeze.

Smart Operations
as a Service

ENABLE Service
Platform

Ground Station
Access

Through centralised, customisable dashboards, you have a single source of truth over your operations. That means faster, easier access to the data you need, empowering you to make the best decisions for your business – anywhere, anytime.

You can also outsource the operations you want with our Smart Operations as a Service (SOaaS). Our proven expertise in ground operations delivers lean, cost-effective services that help you achieve your goals – both today and over the long-term.
